

**THE SEA BOOK 4
BY WILLIAM NIU
A BOOK ABOUT 4 KINDS OF SEA
CREATURES**

THE BUTTERFLY FISH

What fish is as beautiful as a butterfly? What fish pattern to its stripes? What fish like to eat polyps and worms?

What am I?

Can you find me in this picture?

I AM A BUTTERFLY FISH.

A butterfly fish is a very common site near the coral reef. They can found throughout the world but they only live in coral reefs. There are about 114 different kinds of butterfly fish in the world! They are very thin, almost as thin as a disk. Butterfly fish is only the size of a tea cup (8 inches). Every one of them should have a pattern of its stripe. Different kinds of butterfly fish have different colors, such as blue, red, orange, or yellow. Butterfly fish can blend in the background with their skin color.

MEAL.**

THE QUEEN ANGLEFISH

What fish have a blue-ringed black spot on their head? What fish got its named of that spot that looks like a crown? What fish is very shy?

What am I?

Can you find me in this picture?

I AM A QUEEN ANGLEFISH.

Queen angle fish's name is named after its blue-ringed black spot that looks like a crown which people think it looks like a queen and so people named it queen anglefish. They are a shy fish. They often live in the warm waters of the Caribbean and western Atlantic. They are a shy fish. But they have beautiful colors on their body. Their body could be blue or bluegreen. They like to eat jellyfish, corals, plankton and algae. A queen anglefish can live up to 15 years and can be as long as 18 inches!

THE QUEEN ANGELFISH GETS ITS NAME FROM THE CROWN-LIKE RING ON ITS HEAD.

THE SEAHORSE

What sea creatures look like yellow horses floating in the sea? What sea creatures' babies are being born by the male? What sea creatures are rare and people made medicine out of them?

What am I?

Can you find me in this picture?

I AM A SEAHORSE.

Seahorse is a very strange and very beautiful animal. They are very strange because we know most creatures' babies are made by their mother. But the baby seahorses came for their father! They looks like they are strange but they are beautiful. They can turn themselves into the color of the surroundings. A seahorse can live between 1-5 years. They are found throughout the tropical water of the world. They can be small or large. They can be 0.6 inches or they can be 14 inches! There are about 43 different kinds of seahorses in the world.
